

Warmness: I love my Harkila Kana

The time for a final review has come. I received my [Kana](#) suit right before Christmas and I decided to give the jacket some rest right before Easter but, the weather changed and we hung around until the beginning of May. My impressions? If you want to know more about the Kana technical features, and get a detailed description of the suit (jacket and trousers), [click here](#) to read the first part of my review. Today I am going to tell you what I think of them after having field tested them for several months.

In spring

First of all, I must tell you that we had a very cold and foggy winter, but it hardly rained/snowed, so I cannot say exactly how waterproof the suit is. I think it is, but the maximum time I spent under a heavy rain (without umbrella) was one hour, one hour and a half. Was I dry? Yes, I was and, once at home, the jacket dried reasonably quickly which is a very good point. Do I think the Kana to be best garment you can wear during a heavy rain? Probably not, but this suit has still much to offer.

Let's start from the bottom: the trousers. The [Kana trousers](#) are incredibly warm: too warm to be worn together with the jacket if the temperature is above 0°C, or if you plan to be very active. Nevertheless, they become lovely if you have to stay still, or when temperatures fall below zero. The same could be said about the jacket but, wearing it with a plain pair of trousers, you can make it more adaptable to warmer days. It really depends on what you decide to wear underneath: a proper sweater in winter, or a shirt in spring. The [Kana jacket](#) kept me very warm all winter. We had a very cold winter, with much much fog which can affect the way you perceive the real temperature: 0°C in a thick fog is much worse than -5° on a dry sunny day. I remember spending hours in the fog waiting for a field trial to start: it never started as the fog never dissipated but, whereas all the other people were freezing, I was perfectly fine and happy. I like to underline the adjective "happy" because I am very sensitive to extreme temperatures, therefore the opportunity to be fine whatever the weather, is greatly appreciated! I think, on that day, that happiness was painted on my face, people noticed it and quickly connected it to the technical suit I was wearing and asked me about the brand. They thought it was Italian and when I explained it was made by [Harkila](#) and it was Scandinavian and more questions came...

Testing...

After the cold foggy winter we had an unpredictable spring, filled with cold windy days: the Kana jacket, on paper, was too warm, but I had nothing to lose by testing it in these conditions and, surprise... it passed the test. The trick was wearing only a shirt underneath: this combination was perfect for windy days. Again, it was not cold "on paper" , but strong northern winds blowing from the Alps modified the temperature's perception. I tested the Kana during two wind storms: the first one happened in a wonderful sunset, the wind had cleared the sky and I was trying to take pictures standing still by a river with my camera. I was warm but for the hands as I forgot to bring gloves; the second storm involved rain and we did extremely well, finally certifying the Kana as "windproof".

You can see how it looks once worn in the slideshow at the bottom of the article ([for static gallery click here](#)), this is a size 36 (I wear an IT 40/42 –UK 8). Remember that I am... err... fairly short hence the jacket, which is indeed long, might look it even longer. The extra length was meant to keep you warmer and it does the job. Any notes about the trousers? I think I'd say that, despite being padded, they do not make me look like *Bibendum* (the Michelin Man), which I appreciate! *Disclaimer:* in the photo you'll see a girl wearing only a fleece while I was all wrapped up in the Kana: it was -5°C and

we were by a frozen lake, but she was wearing multiple layers underneath the fleece and... She is often referred as “the Russian” being absolutely unaffected by cold weather. [The [Lilja Cardigan](#) will be reviewed separately, I am back to wearing the [Jerva](#) now].

Could the Kana be improved? It could benefit from two minor changes that would make it more versatile. The jacket lacks of hand warmer pockets and you sometimes would like to have them when it is very cold outside. It features, indeed, two large front pockets which are deep and large, perfect for storing shots shells and other items, but not padded. Is this relevant? Yes and no: padded pockets would keep your hands and your cell phone warmer. There is also a chest pocket in which the cell phone can be placed, but it is not really handy if you want to check the phone often, the hand warmer pockets would solve all these issues. The second point we could consider is the hood: it is a lovely and warm hood, which can be of great help when it is cold and windy, but not always

convenient when it rains. Let me explain better: the hood, as mentioned in the first article, has a bear-like fur lining. I love it as it keeps me warm but, in case of rain, it forces me to wear the hood: if I do not, the fur gets soaked and will not dry fast. But wearing a hood in the rain is not always the best choice, especially if you are shooting, you need to mount a shotgun/rifle on your shoulder and you need a wider field of view: a detachable hood would bring the Kana jacket closer to perfection.

Summarizing, the Kana suit can help you during freezing and windy days ***and it is great for:*** stalking, wildfowling, driven shooting and any not so intense activity in cold weather, ***but*** the Kana jacket is versatile enough to be worn for rough shooting and in slightly warmer weather.

Harkila Jerva: Field Test

A Siberian wind is blowing. Well I am not that sure it is Siberian but, it is blowing from East and it is very cold. Foreigners imagine Italy to enjoy a wonderful warm and sunny weather all year round. It is a hoax! I bet those involved in tourism spread this rumour, I can assure you that here in Northern Italy we often have very cold winters! What the cold wind is trying to tell me, however, is that the time has come to stop testing my Jerva suit. Those who follow the blog, already know that I was given an outdoor shooting/hunting suit made by [Harkila](#) to test it. I already described the suit's technical features and aesthetic details, you can read about them [here](#), I will now tell you how I tested it and what I think. The suit came in mid October, and I wore it for one month, almost daily. As I work (and study) from home, I do not

have to follow a specific dress code and, therefore, in autumn and winter, I go around dressed like... a gamekeeper. Living in the suburbs, I have easy access to the countryside and my dog gets daily walks and training sessions in the fields, this means I have to wear clothes suitable to mud, wind, rain and fog. Once I return home I forget to get changed and I continue the day with the same clothes. This means I might go to the supermarket or to the post office wearing green and brown country attire, and this also mean I have to look pretty in those clothes. Looking like a gamekeeper is ok, looking like a Canadian lumberjack is not, and the line separating these two is really thin. While wearing my Jerva suit around none seemed to notice me too much which means the clothes were looking nice on me. A friend owning a small boutique saw the jacket, wanted to try it on and asked me about it, about its brand and so on: this clearly defines the Jerva Jacket as stylish!

Well tailored

But let's go on with the actual test in the field, starting from the [jacket](#). The jacket is very comfortable and the stretch panels allow hunters and shooters to move freely. You can mount your shotgun quickly, without feeling restrained by the sleeves, and you can also sit, lie down and stretch as much as you need to climb in and out of ditches. These same features are enjoyable during dog training: let's say you have to grab the dog quickly... well, you can! I wore the suit during

country walks, training, shooting and field trials, in different weathers. When the sun was really high, the jacket proved to be too warm but, on ordinary days (temperatures ranging from 8°C to 15°C) it proved to be perfect for active hunters. What about wind and rain? I will give grade it A+ for wind and B for rain. The Jerva and its zips kept the wind at bay and proved capable of dealing with light rain. It was fine for short walks in the rain, or for light rain and fog, but I do not think it can cope with heavy rains and/or hours spent under the rain. Burrs and briars? The jacket does not pick up burrs, which is a very good thing, but I would not use it to go into very thick bushes. I entered some to follow the dog working on pheasants but, I would not recommend the it for heavy duty tasks, like handling hounds during boar hunting.

Woodcock hunting? It might do, and I would surely recommend it for deer/boar stalking, being the cloth extremely silent. I love its pockets, while not making you look bulky, they are capable of containing many many things, I swear!

Pockets

Overall opinion? Would I suggest purchasing the Jerva jacket and, if so, why and for which purposes? The Jerva jacket is comfortable and practical, yet stylish and feminine: women who go hunting and shooting know that it is hard to find all these features fused together in one garment. So, if you mind the

look and the quality, you should consider the Jerva. You can wear it in Spring/Autumn, when temperatures are agreeable, but weather can change quickly, ignoring what the forecast said. This jacket is perfect for dog training, field trials, country walks looking for mushrooms and unicorns and for shooting/hunting/stalking, provided you do not practice these activities in extreme environments and weathers. If you want to be outside in cold weather, [Harkila Kana](#) will be perfect for you.

Let's now talk about the [trousers](#): I have already [described](#) them and, people reacted to them in the same way they reacted to the jacket so, as far as the look, they are Italian approved. Right before receiving them, I purchased a pair of trekking trousers at LIDL. I admit the only reason I bought them was the colour, as they are the same colour as heather but, anyway, my emotional purchase allowed me to compare them with something of far better quality. Harkila's Jerva, in fact, costs about 10 times the LIDL trousers and there is a reason for it. While LIDL trousers have a great price-quality ratio, the Harkila's cost more, but offer more. Which are the main differences? Material, shape (the way they fit) and, again, noise. Most synthetic waterproof and water resistant fabrics are, indeed, noisy: you move, they swish alerting any preys. Jerva trousers, instead, do not swish and, while being light, offer a reasonable amount of protection: I could feel the nettles wearing the LIDL ones while it did not happen with the Harkila's. As for being waterproof, I think they are both water resistant but, as said about the jacket, I would not recommend these garments in heavy rain. While not waterproof, however, the Jerva dry extremely quickly: I had to face some tall and wet grass during a trial. I was wearing wellies but, being short, the trousers came in contact with grass and could not handle that much water but, despite we had no wind and had only a mild sun, they dried in less than half an hour.

Stretch panels

Last but not least... how do the trousers look once worn? I am posting a couple of pictures for you to see by yourself, they are a little big for me but, nevertheless they look fine. Like the jacket, they have some stretch panels which allow you to move freely and jump from one place to another. You can walk in them, run in them and climb on steep hills. They are comfortable, but they do not make you look like an housewife in pyjamas, smart ladies know this is definitely a good point! It is easy to keep the Jerva suit clean by letting the mud dry and then brush it away. For now, I machine washed the trousers without detergent, not to spoil their water resistance, but looking forward to wearing the suit again in the spring, I plan to buy a specific detergent for Goretex and other

te

Harkila and I

The Universe loves me! It could not be otherwise: Harkila chose me to test some of its products!

For those who have never heard of this brand, but I bet you all have, [Harkila](#) is a Scandinavian company manufacturing

technical garments for hunting and shooting. [Harkila's family](#) were bear and moose hunters and developed their products keeping the hunters' needs in mind. While interacting with them, I was asked if I wanted to test any specific items, I replied that, given the company's reputation for quality, I was going to let them choose for me . They sent me a [Jerva suit](#) (Lady Jacket & [Trousers](#)). I am testing it at the moment, this first article will discuss only the garments technical features and my first impressions. The final opinion will come after a suitable amount of testing.

First impressions: when I found my package in the mailbox, I was surprised it was small and light, but when I opened it, It showed a little treasure. Jacket and trousers were coming in a very nice chocolate brown, a colour that I like, and that suits me. Being keen on details, I promptly noticed the cardboard label: I would define it "country chic" and very classy, then came the materials. The suit is made of two different fabrics: the stretch very technical polyester panels are interrupted by lightly waxed cotton, which smells of tradition. Jacket and trousers are soft, light and very tempting: I tried them on immediately! My size is usually XS/S IT 40/42 UK 8/10, but the smallest size available for the Jerva is a S/42/10 (they call it 36). I would consider the jacket a small S/42/10: it is stretchy so it can probably

accommodate someone slightly bigger but, in that case, it would not look that flattering. It is meant to be fitted and to be worn with something light underneath: no bulky sweaters allowed, they would ruin the whole appearance. Trousers, instead, are a little big for me, they are likely to be a generous S/42/10, they are very soft and comfy.

The garments are high quality, you can tell this at the touch and by looking at their the finishes. Furthermore, while being extremely soft and comfortable, they remain stylish and feminine, something hard to find when it comes to technical hunting gear. I must confess I love the tiny red accents placed on the suit. The jacket has an adjustable hem, two front pockets, a double

internal pocket and a smaller pocket on the breast, close to the left shoulder. At a first sight the front pockets do not appear to be deep but they are: a cell phone and the car keys can be stuffed inside. Pockets can be closed with a button, so that you will not lose their content. The smaller pocket and the internal pockets have zips. Trousers have two front pockets and two pockets on the thigh that can be closed with a zip. The cloth is extremely silent, if you walk around wearing the suit, you will notice it makes no noise, which tells me it would be great if you plan to go stalking deer, boar and other large animals in the woods.

The jacket's adjustable hood and a light wax finishing make this suit water-resistant: I do not think it will keep you dry if you spend a whole day under a heavy rain, but it would do the job under moderate rain, for brief periods of time. Harkila defines the Jerva suit light (I can confirm) and hardwearing (I am testing it), suitable for a moderately rough environment: I am testing it during dog training, field trials and for shooting in not so hostile environments.
